

Lesson 1 - Quick Reference Card

▢ Essential Commands

```
# Start development server
php artisan serve

# List all routes
php artisan route:list

# Clear cache
php artisan cache:clear

# Display all artisan commands
php artisan list

# Check Laravel version
php artisan --version
```

▢ Key Directories

Path	Purpose
app/Http/Controllers/	Controller files
app/Models/	Eloquent models
routes/web.php	Web routes
resources/views/	Blade templates
config/	Configuration files
database/migrations/	Database migrations
public/	Public files and entry point

▢ Basic Route Syntax

```
// Simple route
Route::get('/path', function () {
    return 'Hello World';
});

// Return a view
Route::get('/page', function () {
    return view('viewname');
});

// Return JSON
Route::get('/api/data', function () {
    return response()->json(['key' => 'value']);
});
```

❏ Creating a Blade View

File: `resources/views/myview.blade.php`

```
<!DOCTYPE html>
<html lang="en">
<head>
    <title>My View</title>
</head>
<body>
    <h1>Hello from Blade!</h1>
    <p>Current time: {{ date('H:i:s') }}</p>
</body>
</html>
```

Route:

```
Route::get('/myview', function () {
    return view('myview');
});
```

❏ Request Lifecycle (Simplified)

```
Browser Request
↓
public/index.php
↓
routes/web.php
↓
Controller (optional)
↓
Model (optional)
↓
View
↓
Response to Browser
```

⚙ Environment File (.env)

```
APP_NAME=MyLaravelApp
APP_ENV=local
APP_DEBUG=true
APP_URL=http://localhost

DB_CONNECTION=mysql
DB_HOST=127.0.0.1
DB_PORT=3306
DB_DATABASE=laravel
DB_USERNAME=root
DB_PASSWORD=
```

Never commit .env to Git!

📦 MVC Pattern

- **Model:** Data and business logic (database)
- **View:** Presentation layer (HTML/Blade)
- **Controller:** Handles requests and coordinates between Model and View

□ Lesson 1 Checklist

- [] Understand what Laravel is
 - [] Know the project structure
 - [] Able to start development server
 - [] Able to create basic routes
 - [] Able to create simple Blade views
 - [] Understand request lifecycle
 - [] Know basic Artisan commands
-

□ Key Takeaways

1. Laravel uses MVC architecture
 2. Routes are defined in `routes/web.php`
 3. Views are stored in `resources/views/`
 4. Artisan is your command-line helper
 5. `.env` file contains environment settings
-
